WTZ Süd Project: Knowledge exchange and know-how building for knowledge transfer - IMPACT as a significant aspect of research projects
Projectpartners:

WTZ Süd is funded by aws, with funds of the Nationalstiftung für Forschung, Technologie und Entwicklung (Österreich-Fonds).

Research is expected to have an impact within and beyond Academia. Research shall provide benefit for society.

This expectation is increasingly reflected in research funding programs and demands from research policy and society. An increasing number of researchers want to make a societal impact with their work.

In order to support researchers in planning, presenting and achieving the impact of their research, we cordially invite you to this event.

We have inputs from international experts and time for a panel discussion. There will be the opportunity for exchange and networking with snacks and drinks.

The event addresses researchers as well as research support staff. The talks and discussions are in English.
